No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                genome p

N;Contains: core protein
C;Species: hepatitis C virus
A;Variety: genotype 2, N6
C;Date: 19-May-1994 #sequence_revision 26-Jul-1996 #text_change 17-Nov-2000
C;Accession: $41357
Submitted to the EMBL Data Library, January 1994
A;Bescription: Analysis of hepatitis C virus genotypes 1 to 5 by LiPA.
A;Reference number: $41357
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  genome polyprotein - hepatitis C virus (genotype 1, N6) (fragment)
N;Contains: core protein
C;Species: hepatitis C virus
A;Variety: genotype 1, N6
C;Date: 19-May-1994 #sequence_revision 26-Jul-1996 #text_change 17-Nov-2000

genome polyprotein - hepatitis C virus (genotype 5, N4) (fragment)
N;Contains: core protein
C;Species: hepatitis, C virus
A;Variety: genotype 5, N4
C;Date: 19-May-1994 #sequence_revision 26-Jul-1996 #text_change 17-Nov-2000
C;Accession: $4137,
Submitted to the EMBL Data Library, January 1994
A;Rescription: Analysis of hepatitis C virus genotypes 1 to 5 by LiPA.
A;Reference number: $41370
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      genome polyprotein - hepatitis C virus (genotype 1, N1) (fragment)
N;Contains: core protein
C;Species: hepatitis C virus
A;Variety: genotype 1, N1
C;Date: 19-May-1994 #sequence_revision 26-Jul-1996 #text_change 17-Nov-2000
A; Variety: genotype 5, N5
C; Date: 19-May-1994 #sequence_revision 26-Jul-1996 #text_change 17-Nov-2000
C; Accession: S41371
Submitted to the EMBL Data Library, January 1994

Superfamily: hepetitis C virus genome polyprotein C; Superfamily: hepetitis C virus genome polyprotein C; Keywords: capsid protein; core protein; polyprotein F;1-115/Product: core protein #status predicted <NAT>
                        polyprotein - hepatitis C virus (genotype 1, N10) (fragment)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               genome polyprotein – hepatitis C virus (genotype 1, N2) (fragment)
                                                                                                                                                    C; Accession: S41342
R; van Doorn, L.J.; Kleter, G.E.M.; Brouwer, J.T.
submitted to the EMBL Data Library, January 1994
A; Description: Analysis of hepatitis C virus genotypes 1 to
A; Reference number: S41341
A; Accession: S41342
                                              N.Contains: core protein
S.Species: hepatitis C virus
A.Variety: genotype 1, N10
C.Date: 19-May-1994 #sequence_revision 26-Jul-1996
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 PKPORKPNRNTNRRPQDVKFPGGGQIVG 28

Listing first 45 summaries

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

- 1- FUNCTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.
NS3 AND NS5 MAY FLAY A ROLE IN THE VIRAL RNA REPLICATION.
C -1- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPROTEIN BAND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
                                                                                                                         01-AUG-1992 (Rel. 23, Created)
01-AUG-1992 (Rel. 23, Last sequence update)
16-OCT-2001 (Rel. 40, Last annotation update)
66-noome polyprotein [Contains: Capsid protein C (Core protein) (P22);
Envelope glycoprotein El (GP32) (GP35); Envelope glycoprotein E2
(GP68) (GP70) (NS1)] (Fragment).
Hepatitis C virus (isolate HC-32) (HCV).

Hepatitis C virus (isolate HCV-476) (HCV).
Hepatitis C virus (isolate HCV-476) (HCV).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Abe K., Inchauspe G., Fullsawa K.;
"Genomic characterization and mutation rate of hepatitis C virus isolated from a patient who contracted hepatitis during an epidemic of non-A, non-B hepatitis in Japan.";
J. Gen. Virol. 73:2725-2729(1992).
-I- SUBBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
NONSTRUCTURAL PROTEIN NS1 (POTENTIAL)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  REMOVED FROM CAPSID PROTEIN C BY THE CELLULAR AMINOPEPTIDASE.

"Genomic characterization and mutation rate of hepatitis C virus isolated from a patient who contracted hepatitis during an epidemic of non-A, non-B hepatitis in Japan.";
J. Gen. Virol. 73:2725-2729(1992).
-!- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLECCAPSID COVERED BY A LIPOPROTEIN BAYELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLECCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Hepatitis C virus (isolate HCV-KF) (HCV).

-1- FUNCTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.

NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.

-1- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY LIPOPROTEIN ENVELOPE CONSISTS OF TWO PROTEINS:

PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MNNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MEDLINE-9223023: PubMed-1314459;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         genotypes.";
Virology 188.331.341(1992).

1- FUNCTION: THE SWALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE
HYDROPHOBIC. SUGGESTHIG A POSSIBLE MEMBRANE-RELATED FUNCTION.

NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.

1- SUBUNIT: THE VIRION OF THIS VIRIOS IS A NUCLEOCAPSID COVERED BY
LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF
PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DNA stage; Flaviviridae;

Genome polyprotein [Contains: Capsid protein C (Core protein) (P22);
Envelope glycoprotein El (GP32) (GP35); Envelope glycoprotein E2
(GP68) (GP70) (NS1); Protein P7; Nonstructural protein NS2 (P21)
(EC 3.4.22-); Protease/helicase NS3 (P70) (Hepacivirin)
(EC 3.4.21-); Nonstructural protein NS4A (P4); Nonstructural protein NS4B (P27); Nonstructural protein NS5A (P56); Nonstructural protein NS5B (P66) (P70) (RNA-directed RNA polymerase) (EC 2.7.7.48)].
Hepatitis C virus (isolate Japanese) (HCV).
Virusee; SSNNA positive-strand viruses, no DNA stage; Flaviviridae;

Envelope protein; Helicase; ATP-binding;
al protein; Hydrolase; Serine protease;
-!- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS: E1 AND E2. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
-!- PTW: THE STRUCTURAL PROTEINS C, E1 AND E2 ARE PRODUCED BY PROTEOLYTIC PROCESSING BY THE HOST SIGNAL PEPTIDASES.
-!- SIMILARITY: THE NS2 PROTEASE BELONGS TO PEPTIDASE FAMILY U39.
-!- SIMILARITY: THE NS3 PROTEASE BELONGS TO PEPTIDASE FAMILY S29.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    POTENTIAL.

Machedida Sequence of the genomic RNA of hepatitis C virus isolated
from a human carrier: comparison with reported isolates for conserved
if and divergent regions. 7.
Gen. Virol. 72:2697-2704(1991).
HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.
NS3 AND NS5 MAY PLAX A ROLE IN THE VIRAL RNA REPLICATION.
NS3 AND NS5 MAY PLAX A ROLE IN THE VIRAL RNA REPLICATION.
CHYDRITIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6
position, Cys or Thi in pl and Ser or Ala in pl'.
C -- CATALITY ACTIVITY: N nucleoside triphosphate - N diphosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                 01-AUG-1992 (Rel. 23, Created)

           Genome polyprotein (Contains: Capsid protein ( (Core protein) (P22); Envelope glycoprotein E1 (GP32) (GP35); Envelope glycoprotein E2 (GP68) (GP69) (GN31); Protein P7; Nonstructural protein NS2 (P21) (EC 3.4.22.-); Protease/helicase NS3 (P70) (Hepacivirin) (EC 3.4.21.98); Nonstructural protein NS48 (P4); Nonstructural protein NS58 (P56); Nonstructural protein NS58 (P65) (P70) (RNA-directed RNA polymerase) (EC 2.7.7.48)]. Hepatitis C virus (Laolate HC-J8) (HCV).
                                                                                                                                                                                                                                                                                                                                                          JIONGOY 188:331-341(1992).

-I- FUNCTION: THE SMALL PROTEINS NSZA, NSZB, NS4A AND NS4B ARE HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.

NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.

-I- CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6 posttion, Cys or Thr in Pl and Ser or Ala in Pl'.

-I- CATALYTIC ACTIVITY: N nucleoside triphosphate - N diphosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (RNA)(N).
SUBUNT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPROPERIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C. AND MRNA.
                                                                                                                                                                                                                                             MEDLINE-92230232; PubMed-1314459; Okamoto H., Kurai K., Okada S.-I., Yamamoto K., Lizuka H., Tanaka Vakuda S., Tsuda F., Mishiro S.; "Full-length sequence of a hepatitis C virus genome having poor homology to reported isolates: comparative study of four distinct genotypes.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SIMILARITY: THE PROTEASE BELONGS TO PEPTIDASE FAMILY S29.

01-AUG-1992 (Rel. 22, Last annotation update)
Genome polyprotein (Contains: Capsid protein C (Core protein) (P22);
Envelope glycoprotein El (GP32) (GP35); Envelope glycoprotein E2
(GP68) (GPV0) (NS1); Protein P7; Nonstructural protein NS2 (P21)
(EC 3.4.21.98); Nonstructural protein NS4A (P4); Nonstructural protein
NS4B (P27); Nonstructural protein NS5A (P56); Nonstructural protein
NS5B (P65) (P70) (RNA-directed RNA polymerase) (EC 2.7.7.48)].
Hepatitis C virus (isolate I) (HCV)
                                             CELLULAR AMINOPEPTIDASE.
CARSID PROTEIN ( (POTENTIAL).
MATRIX PROTEIN (POTENTIAL).
MAJOR ENVELOPE PROTEIN E (POTENTIAL).
NONSTRUCTURAL PROTEIN NS1 (POTENTIAL).
NONSTRUCTURAL PROTEIN NS2 (POTENTIAL).
NONSTRUCTURAL PROTEIN NS2 (POTENTIAL).
NONSTRUCTURAL PROTEIN NS4 (POTENTIAL).
NONSTRUCTURAL PROTEIN NS4A (POTENTIAL).
NONSTRUCTURAL PROTEIN NS4A (POTENTIAL).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
Polyprotein; Glycoprotein; Transferase; RNA-directed RNA polymerase; Core protein; Coat protein; Envelope protein; Halicase; APP-binding; Transmembrane; Nonstructural protein; Hadrolase; Serine protease.

Gallegos C., Coit D., Medina-Selby A., Barr P.J., Weiner A.J.,
Bradley D.W., Kuo G., Houghton M.;
Genetic organization and diversity of the hepatitis C virus.";
Proc. Natl. Acad. Sci. U.S.A. 88:2451-2455(1991).
- Frunction: THE SMALL PROFEINS NS2A, NS2B, NS4A AND NS4B ARE
HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELEATED FUNCTION.
NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.
- CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6 postion, Cys or Thr in P1 and Ser or Ala in P1'.
- CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +
                                                                                                                                          (RNA)(N).

SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPROTEIN ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Polyprotein; Glycoprotein; Transferase; RNA-directed RNA polymerase;

The Talwanese hepatitis C virus genome: sequence determination and mapping the 5' termini of viral genomic and antigenomic RNA.";
Virology 188:102-113(1992).
I-FUNCTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.
I-CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6 position, Cys or Thr in P1 and Ser or Ala in P1'.
I-CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (knA)(w).
SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY
LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PRT; 3010 AA

-!- FUNCTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.

NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.

-!- CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6 position, Cys or Thr in P1 and Ser or Ala in P1'.

-!- CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (RNA)(N).

COMPOSED OF A 36 KDA CATALYTIC SUBUNIT (SUBUNIT C). AND A 65 KDA
CONSTANT REGULATORY SUBUNIT (PR65 OR SUBUNIT A), THAT ASSOCIATES
WITH A VARIETY OF REGULATORY SUBUNITS. PROTEINS THAT ASSOCIATES
WITH THE CORE DIMER INCLUDE THREE FAMILIES OF REGULATORY SUBUNITS
B (THE R2/B/PR55/B55, R3/B''/PR72/PR130/PR59 AND R5/B'/B56
FAMILIES), THE 48 KDA VARIABLE REGULATORY SUBUNITY
AND CELL SIGNALING MOLECULES.
SUBCELLULAR LOCATION: CYTOPLASMIC AND NUCLEAR IN INTERPHASE,
NUCLEAR DUBLING MILESIS.

-1- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY LIPOPROPEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROFIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA (BY SIMILARITY).

-1-SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY
LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF
PROTEIN C AND MRNA (BY SIMILARITY).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 8

Sequence 1, Application US/08380160

Patent No. 6235284
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT:
JOLIVET, Michel
TITLE OF INVENTION:
SYNTHETIC POLYPEPTIDES BELONGING TO THE
TITLE OF INVENTION:
FOR DETECTING THE LATTER
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
AUTHORS: Ogata, N. et al.
TITLE: Nucleotide Sequence and Mutation Rate of the H Strain
Patent No. 6576240
                                                                                                                                                                                                                                               Query Match

No. 5639594el Linear and Branched Peptides Effective
in Diagnosing and Detecting No. 5639594-A, No. 5639594-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 61;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 3, Application US/08530550
Patent No. 5736321
GENERAL INFORMATION:
APPLICANT: Hosein, Barbara
APPLICANT: Wang, Chang Yi
TITLE OF INVENTION: Peptides Effective for Diagnosis and
TITLE OF INVENTION: Detection of Hepatitis c Infection
                                                                                                                                                                                                                                  MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC COMPATIBLE
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFWARE: PATENTIN RELEASE #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/083,947
FILING DATE: 19930628
CLASSIFICATION: 424
PRIOR APPLICATION DATA:
APPLICATION NUMBER: US 946,054
FILING DATE: 15-SEP-1993
ATTORREY/AGENT INFORMATION:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SOFTWHARE: Patentin Release #1.0, Version #1.25
